

BOT CHAIN NATIVE

BountyHub

Communities fund what gets built.

A community-funded bounty platform where projects create opportunities, contributors submit work, and rewards are distributed transparently.

The Problem

02

The current workflow creates friction for users, teams, and communities.

- **Challenge 1**

Development bounties are often scattered across chats, forms, and community channels.

- **Challenge 2**

Contributors may lack clarity around funding, selection, and reward status.

- **Challenge 3**

Communities need better tools for coordinating votes, submissions, and payouts.

- **Challenge 4**

Completed contributions are rarely captured as transparent on-chain records.

The Solution

03

A community-funded bounty platform where projects create opportunities, contributors submit work, and rewards are distributed transparently.

Create

Create and fund development bounties with clear requirements and deadlines.

Connect

Let contributors discover opportunities and submit completed work.

Automate

Support community review or voting where appropriate.

Verify

Record winners and distribute rewards transparently on-chain.

Core Features

04

A focused MVP designed around the product's core workflow.

Bounty creation

Designed for a simple, transparent on-chain user experience.

Community funding

Designed for a simple, transparent on-chain user experience.

Contributor submissions

Designed for a simple, transparent on-chain user experience.

Voting & review

Designed for a simple, transparent on-chain user experience.

Reward distribution

Designed for a simple, transparent on-chain user experience.

Contributor history

Designed for a simple, transparent on-chain user experience.

Who It Is For

Designed for practical adoption across the BOT Chain ecosystem.

DAOs & Communities

BountyHub gives daos & communities a simpler way to use its core on-chain workflow.

Web3 Projects

BountyHub gives web3 projects a simpler way to use its core on-chain workflow.

Developer Ecosystems

BountyHub gives developer ecosystems a simpler way to use its core on-chain workflow.

Builders & Creators

BountyHub gives builders & creators a simpler way to use its core on-chain workflow.

Why BOT Chain

06

BOT Chain's EVM-compatible infrastructure supports fast, low-cost on-chain applications.

- **Benefit 1**

Transparent funding and payouts improve visibility for contributors.

- **Benefit 2**

Fast settlement supports practical reward distribution.

- **Benefit 3**

On-chain activity creates verifiable contribution records.

- **Benefit 4**

BountyHub can help ecosystem projects attract and coordinate builders.

Current Status & Roadmap

07

Focused on shipping, validating, and refining the product on BOT Chain Testnet.

01

MVP

Bounty creation, funding, submissions, and reward flow.

02

Testnet

Deploy contracts and validate end-to-end flows on BOT Chain Testnet.

03

Refine

Improve voting, review, transaction handling, and contributor UX.

04

Adoption

Onboard ecosystem projects and communities with real bounties.

What We Want From BOT Chain

08

Co-marketing and ecosystem support can help accelerate early adoption.

- 1 Highlight BountyHub across BOT Chain social media channels.
- 2 Feature BountyHub on the BOT Chain website and ecosystem/project directory.
- 3 Connect BountyHub with DAOs, developer communities, projects, and builders.
- 4 Amplify BountyHub testnet launch, active bounties, and product milestones.
- 5 Collaborate on ecosystem bounties, builder campaigns, and hackathon activations.
